## DATA VALIDATION REPORT

RE: COC №: N008, N011

Site: Naval Submarine Base, Groton, CT

Reference: NVDV930503A

Volatiles: 10/soil/2DMW11S(2-4), 3MW12S(0-3), 2WTB8(1-3), 2WTB8(6-8),

2WTB8(10-12), 2WTB3(4-6), 2WTB3(10-12), 2WTB3(15-17),

2WTB3(20-22), 2WTB9(4-6).

Semivolatiles: 10/soil/2DMW11S(2-4), 3MW12S(0-3), 2WTB8(1-3), 2WTB8(6-8),

2WTB8(10-12), 2WTB3(4-6), 2WTB3(10-12), 2WTB3(15-17),

2WTB3(20-22), 2WTB9(4-6).

Pesticides: 10/soil/2DMW11S(2-4), 3MW12S(0-3), 2WTB8(1-3), 2WTB8(6-8),

2WTB8(10-12), 2WTB3(4-6), 2WTB3(10-12), 2WTB3(15-17),

2WTB3(20-22), 2WTB9(4-6).

Metals/CN: 10/soil/2DMW11S(2-4), 3MW12S(0-3), 2WTB8(1-3), 2WTB8(6-8),

2WTB8(10-12), 2WTB3(4-6), 2WTB3(10-12), 2WTB3(15-17),

2WTB3(20-22), 2WTB9(4-6).

#### INTRODUCTION

META Environmental, Inc. (META) has completed a validation of the volatile, semivolatile, and pesticide organic and inorganic analytical data from COC Nos. N008 and N011 low level soil samples collected from the Naval Submarine Base site in Groton, CT. The data were evaluated according to guidelines adapted by META, and based on the U.S. EPA Region I Functional Guidelines for Evaluating Organic Analyses (2/88), the U.S. EPA Region I Functional Guidelines for Evaluating Inorganic Analyses (6/88), and the NEESA Sampling and Chemical Analysis Quality Assurance Requirements for the Navy Installation Restoration Program (20.2-047B).

Triclustered Sample Data Sheets detailing the Contract Required Quantitation Limits (CRQLs), laboratory reported results, instrument detection limits, data validation results, and recommendations for each fraction of every sample have been submitted for your convenience.

Data Validation Report COC Nos.: N008, N011

July 13, 1993

The data submitted for COC Nos. N008 and N011 were found to be generally fair. There was much qualification of the VOA data due to blank contamination, calibration, tuning, surrogate recoveries, and internal standard performance. There was some qualification of ABN and PEST data due to calibration. There was some qualification of inorganic data due to blank contamination, spike recovery, duplicate precision, and instrument calibration. The reader should refer to the report for a more detailed discussion of the results.

#### **ORGANIC DATA**

Evaluation of the volatile (VOA), semivolatile (ABN), and pesticide (PEST) organic data was based on the following parameters:

- Data completeness
- Holding times
- $\odot$ GC/MS Tuning
  - Calibration
  - **Blanks**
  - Method blank/spikes
  - Surrogate recoveries
  - Matrix spike/matrix spike duplicate
  - Field duplicate precision
- 0 • Internal standard performance
  - QC check standard performance
  - Pesticide instrument performance
- Compound identification ☺
- 0 • Compound quantitation
- © All criteria were met for this parameter.

#### **Data Completeness**

The data package contained all of the forms required by the SOW. However, several items that are not required, but are necessary for complete validation were not submitted:

Extraction logbook pages were not submitted for the ABN or PEST fraction analyses. As a result, it was not possible to validate the extraction date when evaluating sample holding times.

In addition to the forms required by the SOW, the following items are necessary for a NEESA compliant data package:

The analysis of method/blank spikes, and submission of raw data, summary forms, and control charts for those analyses.

Control charts were submitted with the data package, but raw data and summary forms were not submitted.

In addition, the following items should be noted:

The copies of the Forms IC and IF for the ABN fraction sample 2SWTB8(1-3) were of poor quality. The validator was able to obtain all the necessary information from the raw data, so no action is necessary.

Data Validation Report COC Nos.: N008, N011 July 13, 1993

#### **Holding Times**

All of the VOA fraction samples were analyzed within the required holding times. No action is recommended.

All of the ABN fraction samples were extracted and analyzed within the required holding times. No action is recommended.

The PEST fraction samples 2DMW11S(2-4) and 3MW12S(0-3) were extracted seven days outside of the required ten day holding time. It is recommended to estimate (J<sup>1</sup>, UJ<sup>1</sup>) all positive and non-detected results for those samples. Extraction dates reported on the Forms I were used to evaluate holding times in the absence of the extraction logbook pages.

#### **GC/MS Tuning**

All of the BFB and DFTPP tuning criteria were within the required limits.

It should be noted that the VOA fraction samples 2WTB9(4-6), 2WTB9(4-6)MS, and 2WTB9(4-6)MSD were analyzed 44 hours outside of the required 12 hours from the last tune. It is recommended to estimate (J<sup>24</sup>) positive results and reject (R<sup>9</sup>) non-detected results in those samples.

It should also be noted that the VOA fraction sample 2WTB3(10-12) was analyzed outside the required 12 hours from the last tune. This sample was not even present on the Form V (which lists the samples analyzed after the tune), and had to be added by the validator. It is recommended to estimate ( $J^{24}$ ,  $UJ^{24}$ ) positive and non-detected results in that sample.

Data Validation Report COC Nos.: N008, N011 July 13, 1993

## Calibration

The following problems were noted with the initial and/or continuing calibration of the VOA and ABN GC/MS systems:

VOA instrument HP5995D (initial calibration date 8/30/90):

Compound	CC <u>09/05/90</u>	CC <u>09/10/90</u>	CC 09/11/90
Chloromethane			X
Bromomethane	X	XX	XX
Vinyl chloride		X	X
Chloroethane		X	X
Acetone		X	
2-Butanone		X	X
Vinyl acetate	·	X	•
4-Methyl-2-pentanone		X	X
2-Hexanone		X	X
Tetrachloroethene		X	
Associated Samples:	2DMW11S(2-4), 3MW12S(0-3).	2WTB3(15-17), 2WTB8(1-3), 2WTB8(6-8), 2WTB8(10-12), 2WTB3(4-6), 2WTB3(10-12).	2WTB3(15-17)RE, 2WTB8(6-8)RE, 2WTB8(10-12)RE, 2WTB3(4-6)RE, 2WTB3(10-12)RE.

ABN instrument HP5970J (initial calibration date 09/29/90):

Compound	IC <u>09/29/90</u>	CC 10/04/90
2,4-Dinitrophenol 3,3'-Dichlorobenzidine	X	X X
Associated Samples:	2WTB8(6-8), 2WTB8(10-12), 2WTB3(15-17), 2WTB3(20-22), 2WTB9(4-6), 2WTB9(4-6)MS, 2WTB9(4-6)MSD.	

Data Validation Report . COC Nos.: N008, N011

July 13, 1993

## ABN instrument HP5970J (initial calibration date 07/05/90):

Compound	IC <u>07/05/90</u>	CC <u>09/22/90</u>
Benzoic acid	X	XX
Hexachlorocyclopentadiene	•	<b>X</b> ·
2,4-Dinitrophenol	X	$\mathbf{X}$
4-Nitrophenol	•	
4,6-Dinitro-2-methylphenol		$\mathbf{X}$
3,3'-Dichlorobenzidine		<b>X</b>
Benzo(b)fluoranthene		
Indeno(1,2,3-cd)pyrene		X
Dibenz(a,h)anthracene		· <b>X</b>
Benzo(g,h,i)perylene		X
Associated Samples:	All listed here.	2WTB8(1-3), 2WTB3(4-6), 2WTB3(10-12).

## ABN instrument HP5970J (initial calibration date 07/05/90), continued:

Compound	CC 09/24/90	CC <u>09/27/90</u>
Benzoic acid	XX	X
Hexachlorocyclopentadiene		
2,4-Dinitrophenol		X
4-Nitrophenol		X
4,6-Dinitro-2-methylphenol		
3,3'-Dichlorobenzidine		
Benzo(b)fluoranthene	X	
Indeno(1,2,3-cd)pyrene	X	X
Dibenz(a,h)anthracene	X	
Benzo(g,h,i)perylene	X	
Associated Samples:	None.	2DMW11S(2-4).

Data Validation Report COC Nos.: N008, N011

July 13, 1993

ABN instrument HP5970F (initial calibration date 07/09/90):

Compound	CC <u>09/20/90</u>	CC <u>09/25/90</u>
bis(2-Chloroisopropyl)ether	XX	XX
n-Nitroso-di-n-propylamine	X	
Benzoic acid		X
2-Methylnaphthalene	X	X
Hexachlorocyclopentadiene	X	
2,4-Dinitrophenol	X	X
4-Nitrophenol	X	X
4-Nitroaniline	X	X
Pyrene	X	X
Indeno(1,2,3-cd)pyrene	X	X
Dibenz(a,h)anthracene	X	X
Benzo(g,h,i)perylene	X	X
*Terphenyl-d14	X	X
Associated Samples:	None.	3MW12S(0-3).

It should be especially noted that the compound terphenyl-d14 is a surrogate standard compound. It is recommended to estimate (J<sup>25</sup>) positive results for all compounds associated with the out of control surrogate in the affected samples.

- X %RSD > 30% or %D > 25%; Estimate ( $J^3$ ) positive results.
- XX %RSD or %D > 50%; Estimate ( $I^4$ ,  $UI^4$ ) positive and non-detected results.
- + RF < 0.05; Estimate  $(J^2)$  positive results and reject  $(R^2)$  non-detected results.

#### **Blanks**

The VOA, ABN, and PEST fraction low level laboratory method blanks, equipment, field, and trip blanks contained the following maximum quantities of contaminants:

Data Validation Report COC Nos.: N008, N011 July 13, 1993

Compound	Maximum []	Action Level
Acetone	12 μg/L	120 μg/Kg
4-Methyl-2-pentanone	6 μg/L	30 μg/Kg
Tetrachloroethene	$1 \mu g/L$	5 μg/Kg
1,1,2,2-Tetrachloroethane	1 μg/L	5 μg/Kg
Toluene	$1 \mu g/L$	10 μg/Kg
di-n-Butylphthalate	38 μg/Kg	380 μg/Kg

#### Blank Actions:

- Value < CRQL; report CRQL followed by "U" (U<sup>5</sup>).
- Value > CRQL and < action level; report value followed by "U" (U<sup>6</sup>).
- Value > CRQL and > action level; report value unqualified.

The action level values were compared to the sample values after application of sample dilution factors, and the following recommendations are made: acetone in sample 2DMW11S(2-4), toluene in samples 2DMW11S(2-4), 2WTB3(15-17), 2WTB3(20-22), 2WTB8(10-12), 2WTB8(10-12)RE, 2WTB8(6-8), 2WTB8(6-8)RE, and 2MW12S(0-3), and tetrachloroethene in sample 2WTB8(1-3) should be reported as the CRQL followed by "U" (U<sup>5</sup>); acetone in the samples 2WTB3(15-17), 2WTB3(15-17)RE, 2WTB3(10-12)RE, 2WTB3(20-22), 2WTB3(4-6), 2WTB3(4-6)RE, 2WTB8(10-12), 2WTB8(10-12)RE, 2WTB8(6-8), 2WTB8(6-8)RE, 2WTB9(4-6), 2MW12S(0-3), 2WTB9(4-6)MS, and 2WTB9(4-6)MSD, and toluene in sample 2WTB8(1-3) should be reported as the value followed by "U" (U<sup>6</sup>) (i.e., the CRQL has been raised and the value is considered to be non-detect).

It should be noted that several TIC compounds were found in the VOA and ABN fraction method and field blanks. The RTs of the blank TICs were compared to the RTs of the sample TICs, and where similarities were found, the sample TIC result was flagged with a "B" in the TIC Summary Table (Table 1).

Data Validation Report COC Nos.: N008, N011

July 13, 1993

In addition, all TIC compounds were flagged on the Forms I in the following way:

"JN" Presumptive evidence for the tentative identification of a compound at an

approximate concentration (required flag).

BR" TIC was also found in an associated method, field, equipment, or trip blank, and

is rejected in the sample.

It should be noted that at the request of the client, none of the field, equipment, and trip

blanks associated with the samples in this case were validated. Field, equipment, and trip blank

results were used as reported by the laboratory on the Forms I, with no evaluation of the

accompanying raw data or QC, in order to determine the blank actions applied to the samples.

Method Blank/Spikes

NEESA requires the analysis of method blank/spikes along with the analysis of samples.

The results of the method/blank spikes are to be plotted on control charts and submitted with the

data package.

For the VOA and ABN fractions, the method blank/spike is essentially the same thing

as a method blank. The method blanks submitted by the laboratory may be evaluated as method

blank/spikes by plotting the surrogate recovery results on a control chart. In compliance with

NEESA requirements, the laboratory did submit control charts which plotted the surrogate

recoveries.

For the PEST fraction, a method blank/spike must contain at least two pesticide

compounds and/or one PCB compound, and the recovery results are plotted on a control chart.

META #

Data Validation Report COC Nos.: N008, N011

July 13, 1993

Although the laboratory did submit control charts depicting the recovery of two pesticide and two PCB compounds, it is unclear where the recovery results were obtained. No raw data or forms were submitted for any QC sample labelled as a method blank/spike or containing the same compounds as are shown on the control charts. It is the validator's understanding that the forms and raw data for the method blank/spikes are a required part of the data package, not just the control charts.

**Surrogate Recoveries** 

The VOA fraction surrogate standard compound toluene-d8 was slightly over-recovered in the soil sample 2WTB3(15-17)RE. It is recommended to estimate (J<sup>7</sup>) positive results for all compounds associated with the out of control surrogate in that sample.

All of the ABN and PEST fraction soil surrogate recoveries were within the Contract Required Recovery range (CRR). No action is recommended.

Matrix Spike/Matrix Spike Duplicate

The VOA fraction matrix spike compound chlorobenzene was slightly over-recovered in the MSD. Since that compound was not detected in the native sample, no action is recommended.

The RPD was high for the VOA fraction matrix spike compound 1,1-dichloroethene. Since that compound was not detected in the native sample, no action is necessary.

Data Validation Report COC Nos.: N008, N011

July 13, 1993

The ABN fraction matrix spike compound 1,4-dichlorobenzene was slightly underrecovered in the MSD. Since that compound was not detected in the native sample, no action is recommended.

The RPD was high for the PEST fraction matrix spike compound 4,4'-DDT. Since that compound was not detected in the native sample, no action is recommended.

A comparison of the unspiked compounds present in the sample, MS, and MSD yields the following information:

<u>Sample</u>	<u>MS</u>	<u>MSD</u>	<u>%RSD</u>
34	41	68	38%
15	14	17	10
ND	68J	ND	NC
110	180	120	28
79J	97J	ND	NC
210	300	190	25
<b>190</b> .	260	190	19
240	310	220	18
880	590	610	23
190	220	130	25
160	270	170	30
	34 15 ND 110 79J 210 190 240 880 190	34 41 15 14 ND 68J 110 180 79J 97J 210 300 190 260 240 310 880 590 190 220	34 41 68 15 14 17 ND 68J ND 110 180 120 79J 97J ND 210 300 190 190 260 190 240 310 220 880 590 610 190 220 130

All of the %RSDs that could be calculated were less than the criterion of < 50% for soils. No actions are recommended.

#### Field Duplicate Precision

There were no field duplicate samples submitted with this case.

Data Validation Report COC Nos.: N008, N011

July 13, 1993

#### **Internal Standard Performance**

All of the VOA fraction internal standard (IS) compounds were under-recovered in the samples 2WTB3(10-12), 2WTB8(10-12), 2WTB8(6-8), 2WTB9(4-6)MSD, and 2WTB3(15-17)RE. It is recommended to estimate (J<sup>15</sup>, UJ<sup>15</sup>) all positive and non-detected results in those samples. The IS compounds 1,4-difluorobenzene and chlorobenzene-d5 were slightly under-recovered in the samples 2WTB3(15-17), 2WTB3(4-6), and 2WTB9(4-6)MS, and the IS compound 1,4-difluorobenzene was slightly under-recovered in the sample 2WTB9(4-6). It is recommended to estimate (J<sup>15</sup>, UJ<sup>15</sup>) all positive and non-detected results for compounds quantitated from the out of control IS's in those samples.

All ABN fraction IS areas were within the CRR. No action is recommended.

#### **Pesticide Instrument Performance**

All DDT RTs were > 12 minutes. All continuing calibration standard compound RTs were within the established RT windows. All DDT and endrin %breakdowns were < 20%. All initial calibration compound %RSDs met the linearity criterion of < 10%. All DBC RT shift %Ds were < 1.5% for wide-bore capillary columns. The laboratory followed the correct 72 hour analytical sequence. No actions are recommended.

The following compounds exceeded the %D criterion of < 15% on the primary (quantitation) column:

Data Validation Report COC Nos.: N008, N011 July 13, 1993

Standard	Compound	Associated Samples
09/29/90 21:46	Endosulfan II Methoxychlor	2WTB3(15-17).
09/29/90 22:53	4,4'-DDD	Same.
09/30/90 11:18	Endosulfan II Methoxychlor	2WTB3(15-17), 2WTB3(20-22), 2WTB9(4-6), 2WTB9(4-6)MS/MSD, 2DMW11S(2-4).
09/30/90 12:26	beta-BHC Endrin 4,4'-DDD	Same.
10/01/90 01:58	gamma-BHC Aldrin	2WTB3(20-22), 2WTB9(4-6), 2WTB9(4-6)MS/MSD, 2DMW11S(2-4), 2WTB8(1-3), 3MW12S(0-3), 2WTB8(6-8), 2WTB8(10-12), 2WTB3(4-6), 2WTB3(10-12).
10/01/90 03:06	alpha-BHC beta-BHC delta-BHC Aldrin Endrin 4,4'-DDD	Same.
10/01/90 12:08	gamma-BHC Aldrin Endosulfan I	2WTB8(1-3), 3MW12S(0-3), 2WTB8(6-8), 2WTB8(10-12), 2WTB3(4-6), 2WTB3(10-12).
10/01/90 13:16	alpha-BHC beta-BHC delta-BHC Endrin 4,4'-DDD	Same.

It is recommended to estimate (J<sup>20</sup>) positive results for the out of control compounds in the associated samples.

Data Validation Report COC Nos.: N008, N011

July 13, 1993

The following compounds exceeded the %D criterion of < 20% on the secondary (confirmation) column:

Standard Compound Associated Samples

10/16/90 22:28 4,4'-DDT 2WTB8(1-3), 3MW12S(0-3).

Methoxychlor

It is recommended to estimate  $(J^{20})$  positive results for the out of control compounds in the associated samples.

It should be noted that Form 8D (Linearity Evaluation Check) was not submitted for the secondary column. Although there are no validation criterion for linearity requirements on the secondary column, the form is supposed to be submitted for all columns on which samples were analyzed. No action is necessary.

#### **Compound Identification**

In accordance with contractual requirements, mass spectra were submitted for all VOA and ABN compounds detected, whether they were identified as false positives or not. It should be noted that TCL compounds were not labelled on the chromatograms. It is required that TCL compound peaks be identified on the chromatogram either by RT or by compound name.

Mass spectral identifications were generally good, and all VOA and ABN compound RRTs were within  $\pm$  0.06 units of the standard RRT.

PEST fraction compound identifications were good.

July 13, 1993

**Compound Quantitation** 

VOA, ABN, and PEST fraction sample quantitation calculations were performed

correctly.

It should be noted that the VOA fraction compound acetone was reported above the

calibration limit of the instrument in the samples 2WTB3(10-12) and 2WTB8(1-3). The sample

should have been diluted and rerun to bring acetone within the calibration range. It is

recommended to estimate (J<sup>23</sup>) positive results for acetone in that sample.

**Tentatively Identified Compounds** 

There were no TICs identified in the ABN fraction sample. The TICs identified in the

VOA fraction samples are summarized in Table 1.

**Data Assessment** 

This package contains reextraction, reanalysis or dilution. After reviewing the associated

QC data, the following recommendations are made:

VOA: <u>2WTB3(15-17) and 2WTB3(15-17)RE</u>

Use all positive and non-detected results from the original analysis.

<u>2WTB3(10-12)</u> and <u>2WTB3(10-12)RE</u>; <u>2WTB3(4-6)</u> and <u>2WTB3(4-6)RE</u>; <u>2WTB8(10-12)</u> and <u>2WTB8(10-12)RE</u>; <u>2WTB8(6-8)</u> and <u>2WTB8(6-8)RE</u>

Use all positive and non-detected results from the reanalyses.

META #

July 13, 1993

**ABN:** No recommendations are necessary.

**PEST:** No recommendations are necessary.

Data Validation Report COC Nos.: N008, N011 July 13, 1993

#### **INORGANIC DATA**

The inorganic data were evaluated based on the following parameters:

- Data completeness
- Holding times
- Calibration verification results
  - Blank results
  - Method blank/spike results
  - Interference check standard results
  - Matrix spike results
  - Field duplicate results
  - Laboratory duplicate results
- Laboratory control sample results
  - ICP serial dilution results
  - Furnace AA results
- Instrument detection limits
- Calculations and transcriptions
- © all criteria were met for this parameter.

#### **Data Completeness**

The data package contained all required forms and raw data. Copy quality was acceptable. There were numerous values crossed out on the computer generated forms that were marked over with pen, making the forms difficult to read.

#### **Holding Times**

Holding times were reviewed and found to meet criteria for all parameters. No action is recommended.

Data Validation Report COC Nos.: N008, N011

July 13, 1993

#### **Calibration Verification Results**

Initial and continuing verifications were reviewed. All standards had acceptable recoveries and frequency criteria were met. The computer printed CCV values on the Form II were crossed out and handwritten in for antimony and arsenic. The written values did not match those from the raw data. Both the originally reported results and the handwritten results were within the required range, so the data are not affected. No action is recommended.

The CRDL standard was low (76%) for lead for samples in sample delivery group (SDG) 1540. Results less than 3 X CRDL should be considered estimated (J<sup>2</sup>) for those analytes due to poor linearity near the CRDL. The 2 X CRDL standard was over-recovered for numerous elements from both SDGs. The table below lists the element, %Rec, and affected SDG.

<u>SDG</u>	Element	%Rec
1540	Copper Silver Zinc	133 129 126
1543	Beryllium Chromium Manganese Silver Cadmium Cobalt Zinc	144 121, 137 147 136 121 121 124

Positive results less than 3 X CRDL for those compounds in the affected samples should be considered estimated (J<sup>2</sup>) due to poor linearity near the CRDL.

July 13, 1993

#### **Blank Results**

The calibration blanks and preparation blanks contained low levels of several metals. The following table lists the maximum concentration of each metal found in any laboratory blank with the resultant action levels. The action level is calculated as 5X the maximum concentration found in any blank. Sample results less than 5X the maximum concentration found in any blank may be due to contamination or instrumental problems, and thus may not be indicative of the actual concentration of the native sample.

Element	Concentration (µg/L)	Action Level (µg/L)
SDG 1540		
Calcium	65.3	327
Copper	22.4	112
Nickel	20.2	101
Potassium	972	4860
Sodium	407	2035
Zinc	11.3	59.0
SDG 1543		
Arsenic	3.0	15.0
Beryllium	2.7	13.5
Calcium	290	1450
Iron	51.2	256
Magnesium	412	2060
Sodium	2654	13270

The above action levels were calculated based on the calibration and preparation blanks only. An equipment blank and a field blank were also analyzed, and the results are listed below.

The following table contains the levels found in equipment blank ER14 and affects samples collected on 08/30/90 and 08/31/90.

Data Validation Report COC Nos.: N008, N011

July 13, 1993

Element	Concentration (µg/L)	Action Level (µg/L)
Beryllium	2.3	11.5
Calcium	275	1375
Iron	340	1700
Lead	4.0	20.0
Manganese	7.6	38.0
Sodium	272	1360
Vanadium	35.3	176.5
Zinc	30.5	152.5

The following table contains the levels found in field blank FB3 and affects samples collected on 08/30/90 and 08/31/90.

Element	Concentration (µg/L)	Action Level (µg/L)
Aluminum	102000	510000
Arsenic	4.2	21.0
Beryllium	2.6	13.0
Cadmium	5.3	26.5
Calcium	255	1275
Iron	326	1630
Manganese	7.6	38.0
Potassium	830	4150
Sodium	626	3130
Vanadium	43.6	218
Zinc	60.6	303

The action level values were compared to the sample values after application of sample preparation and dilution factors, and sample results less than the action level were reported as not detected (UJ³) (see Sample Data Sheets attached to this report).

It should be noted that, at the client's request, none of the field blank samples from this case were validated. The results reported by the laboratory were used to qualify sample results, but no raw or QC data were inspected to verify the reported field blank results.

#### Method Blank/Spike Results

A laboratory control sample (LCS) was analyzed with each batch of field samples. The LCS results were plotted on control charts, and satisfy the NEESA QC requirement for the method blank/spike control program. The LCS results are discussed elsewhere in this report.

#### **Interference Check Standard Results**

The ICP interference check sample results were reviewed and all recoveries met required criteria. The ICS solutions were analyzed at the proper frequency. Several elements were detected in the ICS solution at greater than 2 X IDL that should not have been present. It is believed that part of the reported value for cadmium for sample 2TB9(4-6) is due to an interference from iron. That sample result should be considered an estimate (J<sup>4</sup>), possibly biased high. It is also believed that the entire cadmium result for samples 2DMW11S(2-4) and 3MW12S(0-3) is due to iron interference. It is recommended to report the value flagged "U" (U<sup>4</sup>) (i.e., the detection limit has been raised and the value is considered to be non-detect).

#### **Matrix Spike Results**

Sample 2WTB9(4-6) was used as the in-house soil spike. The recovery for arsenic was less than 30% (27.8%). Positive and non-detected results for that analyte are rejected (R<sup>4</sup>). The recoveries for cadmium and mercury were low (62.6% and 46.3%, respectively). Positive and non-detected results for those analytes should be considered estimates (J<sup>5</sup>, UJ<sup>5</sup>), possibly biased low. The selenium spike was over-recovered (143.5%). Positive results for that analyte should be considered estimates (J<sup>5</sup>), possibly biased high.

Data Validation Report COC Nos.: N008, N011 July 13, 1993

#### Field Duplicate Results

Samples 2WTB3(4-6) and 2WTB9(4-6) were identified as field duplicate samples. Cadmium, mercury, and lead exceeded the RPD criterion of < 30% for aqueous samples. Positive results for those elements have been estimated ( $J^7$ ) due to poor analytical precision.

#### **Laboratory Duplicate Results**

Sample 2TB9(4-6) was used as the in-house soil duplicate. Results for arsenic have been flagged by the laboratory for failing to meet the laboratory criterion for duplicate precision. However, the validation criterion were met, therefore results may be accepted as reported. It is recommended to estimate ( $J^6$ ) positive results for cadmium since the duplicate results were not within  $\pm 2$  X CRDL.

#### **Laboratory Control Sample Results**

The laboratory control sample (LCS) results were reviewed, and the criteria were met for all parameters.

#### **ICP Serial Dilution Results**

Sample 2TB9(4-6) was used for the serial dilution analysis. The laboratory was required to flag three elements for failing to meet the required criterion. On the Form IX, aluminum and magnesium should have been flagged "E", but were not. The %D for those two elements meets

Data Validation Report COC Nos.: N008, N011

July 13, 1993

the validation criterion of < 15%, so results may accepted as reported. The %D for sodium was high (33%). Positive results greater than 10 X IDL shall be estimated ( $J^{12}$ ) due to possible chemical/physical interferences.

#### **Furnace AA Results**

Furnace AA QC data were reviewed. Duplicate injections and one-point analytical spikes were performed for each sample and analyte. All duplicate injections agreed within  $\pm~20\%$ .

Analytical spike results were reviewed and the following problems were noted:

- Almost all of the spikes for thallium, and most for selenium and antimony were over-recovered. Samples were non-detect, therefore no action is necessary.
- The correlation coefficients were below 0.995 for arsenic for samples 2TB3(20-22) and 2TB9(4-6). Positive results should be considered estimated (J<sup>11</sup>).

#### **Instrument Detection Limits**

Quarterly instrument detection limits (IDLs) were provided, and all detection limit criteria were met.

## **Calculations and Transcriptions**

A spot check of calculations and transcriptions was performed and no problems were noted.

**GLOSSARY OF TERMS** 

## **GLOSSARY OF TERMS**

## (In alphabetical order)

ABN	Acid/Base-Neutral. An extraction and analytical method for the determination of semivolatile organic compounds, or a sample extracted and analyzed by that method. Also: BNA, semivolatile, SVOC.
ASP	Analytical Services Protocol. The NYSDEC statement of work.
BFB	Bromofluorobenzene. The compound used for initial tuning of the GC/MS system, prior to the analysis of volatile organic compounds.
CC	Continuing Calibration. A standard solution of organic compounds of known concentration is analyzed periodically to check the continued calibration of the system.
CF	<u>Calibration Factor</u> . In pesticide/PCB analyses, the calibration factor is the area of the standard compound divided by the concentration of that compound in the standard.
CCC	<u>Calibration Check Compound</u> . Any one of a defined subgroup of compounds present in the calibration standards. Used to check the acceptability of instrument performance.
CCV	Continuing Calibration Verfication. A standard solution of inorganic compounds of known concentration is analyzed periodically during sample analyses to verify the continued calibration of the instrument.
CLP	Contract Laboratory Program. The U.S. EPA program that defines analytical, QC, and reporting procedures to generate high quality, defensible data. CLP also has associated the most highly developed and regulated set of data validation guidelines, on which most data validation decisions are based.
COC	<u>Chain of Custody</u> . The documentation that details the history of a given sample, from the time it is collected until the time it has been analyzed.
CRDL	Contract Required Detection Limit. As defined by the U.S. EPA CLP, the minimum concentration at which the laboratory must be able to accurately quantitate the inorganic analyte of interest. Results below the CRDL are reported, but as estimated values.

ICV

## **GLOSSARY OF TERMS**

CRQL	Contract Required Quantitation Limit. As defined by the U.S. EPA CLP, the minimum concentration at which the laboratory must be able to accurately quantitate the organic compound of interest. Results below the CRQL are reported, but as estimated values.
CRR	Contract Required Recovery range. As defined in the U.S. EPA Region I Functional Guidelines for Evaluating Organics Analyses (11/88), the acceptable recovery range for surrogate spike and matrix spike compounds.
DFTPP	<u>Decafluorotriphenylphosphine</u> . The compound used for initial tuning of the GC/MS system, prior to the analysis of semivolatile organic compounds.
EICP	Extracted Ion Current Profiles. Recommended by the U.S. EPA CLP and required by the NYSDEC ASP, the EICP displays the chromatographic peak specific to a m/z ion in a GC/MS analysis.
EPA	Environmental Protection Agency. The United States federal agency governing environmental concerns.
FP	<u>False Positive</u> . Used to designate as non-detect any compound incorrectly identified by the computer.
GC/MS	Gas Chromatography/Mass Spectrometry. An analytical technique used commonly for the determination of volatile and semivolatile organic compounds.
НТ	<u>Holding Time</u> . The contractually defined time in which a sample must be extracted and/or analyzed by the analytical laboratory. Generally calculated from date of sampling.
IC	<u>Initial Calibration</u> . A series of standard solutions of organic compounds are analyzed at different concentration levels to define the initial linearity of the analytical system.

<u>Initial Calibration Verification</u>. A standard solution of inorganic compounds is analyzed immediately following instrument calibration to confirm the accuracy of that calibration.

#### **GLOSSARY OF TERMS**

**IDL** 

<u>Instrument Detection Limit</u>. The lowest concentration at which a particular instrument can reliably detect a given analyte. As differs from the CRQL which is the lowest concentration at which a given analyte may be reliably quantitated. IDLs vary from instrument to instrument, and their determination is required by NYSDEC.

MS/MSD

Matrix Spike/Matrix Spike Duplicate. Prior to extraction, a known quantity of several analytes is spiked into a sample. The sample is analyzed in duplicate and %Recs and RPDs are calculated. Used to monitor matrix effects of the native sample upon the observed sample results.

**MSB** 

Matrix Spike Blank. An aliquot of contaminant-free soil or water is spiked with a known quantity of several analytes. The MSB is analyzed and %Recs are calculated. Required by NYSDEC.

**NEESA** 

Naval Energy and Environmental Support Activity. The regulatory agency for the Navy Installation Restoration Program.

**NYSDEC** 

New York State Department of Environmental Conservation. The New York State agency governing environmental concerns.

%D

<u>Percent Difference</u>. A measure of the variance between two results, relative to the first result.

$$\%D = \frac{R_1 - R_2}{R_2} \times 100$$

where,  $R_1$  is the first result and  $R_2$  is the second result.

%Rec

<u>Percent Recovery</u>. A measure of the recovery of a known amount of analyte.

$$\%\text{Rec} = \frac{A_r}{A_s} \times 100$$

where,  $A_r$  is the amount recovered and  $A_s$  is the amount spiked. (When calculating matrix spike recoveries, the amount of analyte present in the unspiked sample must first be subtracted from the amount recovered).

#### **GLOSSARY OF TERMS**

%RSD

<u>Percent Relative Standard Deviation</u>. A measure of the variance between multiple results.

$$%RSD = \frac{SD}{X} \times 100$$

where, SD is the standard deviation and X is the mean of the values.

**PEST** 

<u>Pesticide/PCB</u>. An extraction and analytical method for the detremination of pesticide and/or PCB compounds, or a sample extracted and analyzed by that method. Also: Pest/PCB, PCB.

QA

Quality Assurance. The system of management that guarantees high quality data output.

QC

<u>Quality Control</u>. Any system of analytical tests and checks that monitors the progress of the data, leading to high quality data output. May also refer to the criteria by which those tests and checks are evaluated.

**RPD** 

Relative Percent Difference. A measure of precision comparing two results.

$$RPD = \frac{D_1 - D_2}{(D_1 + D_2)/2} \times 100$$

where,  $D_1$  is the result from sample 1 and  $D_2$  is the result from sample 2.

**RRF** 

Relative Response Factor. A measure of the response of the instrument to a given compound relative to the response of the instrument to a standard compound.

RT

<u>Retention Time</u>. In GC, the time it takes for a given analyte to move through the analytical system to the detector.

SD

Standard Deviation. In statistics, the standard deviation is a measure of the dispersion of all values around the mean value.

VOA

VTSR

#### **GLOSSARY OF TERMS**

SD = 
$$\frac{\sqrt{(n\Sigma x^2 - (\Sigma x)^2)}}{n(n-1)}$$

where n = number of values and x = individual values.

SOW Statement of Work. A document describing in detail the contractual obligations of the laboratory to the contractor with regards to analytical methods, reporting requirements, and QC, financial, and litigational obligations.

TAL <u>Target Analyte List</u>. The list that defines the specific inorganic parameters of interest in a given analysis.

TCL <u>Target Compound List</u>. The list that defines the specific organic compounds of interest in a given analysis.

TIC <u>Tentatively Identified Compound</u>. Any non-TCL compound which is detected during sample analysis and identified by mass spectral matching alone.

<u>Volatile Organic Compound Analysis</u>. An analytical method for the determination of volatile organic compounds, or a sample analyzed by that method. Also: VOC.

<u>Verified Time of Sample Receipt</u>. The date and time a group of samples is accepted at the analytical laboratory. Appears on the COC. NYSDEC calculates holding times from VTSR rather than from sampling date.

# DATA VALIDATION RECOMMENDATION FOOTNOTES - ORGANICS

- . A blank space denotes no change to the laboratory reported result.  $J^1$ ,  $UJ^1$ Holding times have been exceeded: estimate positive results (J1) and non-detects (UJ1). Refer to Section on "Holding Times" for details.  $J^2$ ,  $R^2$ The initial or continuing calibration RF was low: estimate positive results (J<sup>2</sup>) and reject non-detects (R2). Refer to Section on GC/MS "Calibration" for details.  $J^3$ The initial calibration %RSD was high: estimate positive results (J3). Refer to Section on GC/MS "Calibration" for details.  $J^4$ ,  $UJ^4$ The initial calibration %RSD was greater than 50% or the continuing calibration %D was greater than 25%: estimate positive results (J<sup>4</sup>) and non-detects (UJ<sup>4</sup>). Refer to Section on GC/MS "Calibration" for details. [ J<sup>5</sup> Compound was present in the associated blank. Compound is present in the sample at a concentration less than the CRQL: report the CRQL (U5). Refer to Section on "Blanks" for details. IJ6 Compound was present in the associated blank. Compound was present in the sample at a concentration higher than the CRQL but lower than the "action level": qualify the result by reporting the value followed by "U" (U6). (i.e., the Limit of Detection has been raised for that compound, and the result is considered to be non-detect). Refer to Section on "Blanks" for details.  $J^7$ One or more of the surrogate standard %Recs was greater than the Contract Required Recovery range (CRR): estimate positive results within that area of the chromatogram (J<sup>7</sup>). Refer to Section on "Surrogate Recoveries" for details. J<sup>8</sup>, UJ<sup>8</sup> One or more of the surrogate standard %Recs was less than the CRR: estimate positive results (J<sup>8</sup>) and non-detects (UJ<sup>8</sup>) within that area of the chromatogram. Refer to Section on "Surrogate Recoveries" for details.
- One or more of the surrogate standard %Recs was less than 10%: estimate positive results (J<sup>9</sup>) and reject non-detects (R<sup>3</sup>) within that area of the chromatogram. Refer to Section on "Surrogate Recoveries" for details.

- J<sup>10</sup> The Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) %Recs were not within the CRR for this compound: estimate positive results in the unspiked sample (J<sup>10</sup>). Refer to Section on "Matrix Spike/Matrix Spike Duplicate" for details.
- J<sup>11</sup> The MS and/or MSD %Recs were less than 10% for this compound: estimate positive results in the unspiked sample (J<sup>11</sup>) and reject non-detects (R<sup>4</sup>). Refer to Section on "Matrix Spike/Matrix Spike Duplicate" for details.
- J<sup>12</sup> The MS/MSD %RPD for this compound was high: estimate positive results in the unspiked sample (J<sup>12</sup>). Refer to Section on "Matrix Spike/Matrix Spike Duplicate" for details.
- J<sup>13</sup> Field duplicate %RPD was high for this compound: estimate positive results for this compound in the sample and duplicate (J<sup>13</sup>). Refer to Section on "Field Duplicates" for details.
- One value was non-detect and the other value was greater than the CRQL for this compound in the field duplicate pair: estimate the positive (J<sup>14</sup>) and non-detected (UJ<sup>14</sup>) results for that compound. Refer to Section on "Field Duplicates" for details.
- J<sup>15</sup>, UJ<sup>15</sup> One or more Internal Standard (IS) areas were not within the CRR: estimate positive results (J<sup>15</sup>) and non-detects (UJ<sup>15</sup>) for all compounds quantitated from that IS. Refer to Section on "Internal Standard Performance" for details.
- J<sup>16</sup>, R<sup>5</sup> One or more IS areas were grossly low: estimate (J<sup>16</sup>) positive results and reject (R<sup>5</sup>) non-detected results for all compounds quantitated from that IS. Refer to Section on "Internal Standard Performance" for details.
- J<sup>17</sup>, JN<sup>17</sup>, R<sup>6</sup> % Breakdown for DDT exceeded 20%: estimate positive results for DDT (J<sup>17</sup>), DDD, and DDE (JN<sup>17</sup>) in all associated samples. If no DDT is present, but DDD and/or DDE are present: reject the CRQL (R<sup>6</sup>) for DDT. Refer to Section on "Pesticide Instrument Performance" for details.
- J<sup>18</sup>, JN<sup>18</sup>, R<sup>7</sup> % Breakdown for endrin exceeded 20%: estimate positive results for endrin (J<sup>18</sup>), and endrin ketone (JN<sup>18</sup>) in all associated samples. If no endrin is present, but endrin ketone and/or endrin aldehyde are present: reject the CRQL (R<sup>7</sup>) for endrin. Refer to Section on "Pesticide Instrument Performance" for details.

T<sup>19</sup> Initial calibration %RSD for this compound exceeded 10%: estimate positive results (J<sup>19</sup>) for this compound in associated samples. Refer to Section on "Pesticide Instrument Performance" for details. T<sup>20</sup> Continuing calibration %D for this compound exceeded 15% (quantitation column) and/or 20% (confirmation column): estimate positive results (J<sup>20</sup>) for this compound in associated samples. Refer to Section on "Pesticide Instrument Performance" for details. T<sup>21</sup> The %RSD for this unspiked compound in the sample/MS/MSD set exceeded the advisory criterion of < 30% for aqueous samples or < 50% for soil samples: estimate (J<sup>21</sup>) positive results for that compound in the sample, MS, and MSD. Refer to Section on "Matrix Spike/Matrix Spike Duplicate" for details. **J**<sup>23</sup> The compound result was outside the calibration range of the instrument, and the sample should have been diluted and reanalyzed: estimate (J<sup>23</sup>) positive results for the affected compound. Refer to Section on "Compound Quantitation" for details. J<sup>24</sup>. UJ<sup>24</sup> Samples were analyzed outside of the required 12 hours from the last tune: estimate (J<sup>24</sup>, UJ<sup>24</sup>) positive and non-detected results in the affected samples. Refer to Section on "GC/MS Tuning" for details. T<sup>25</sup> The continuing calibration %D was high for a surrogate standard compound: estimate (J<sup>25</sup>) positive results for all compounds associated with the out of control surrogate in the affected sample. Refer to Section on GC/MS "Calibration" for details.  $\mathbb{R}^1$ reject all non-detects (R1). Holding times have been grossly exceeded:  $\mathbb{R}^2$ The initial or continuing calibration RFs were low: estimate positive results (J<sup>2</sup>) and reject non-detects (R<sup>2</sup>). Refer to Section on "GC/MS Calibration" for details.  $\mathbb{R}^3$ One or more of the surrogate standard %Recs was less than 10%: estimate positive results (J<sup>9</sup>) and reject non-detects (R<sup>3</sup>) within that area of the chromatogram. Refer to Section on "Surrogate Recoveries" for details.  $\mathbb{R}^4$ The MS and/or MSD %Recs were less than 10% for this compound: estimate

positive results in the unspiked sample (J<sup>11</sup>) and reject non-detects (R<sup>4</sup>). Refer to

Section on "Matrix Spike/Matrix Spike Duplicate" for details.

- R<sup>5</sup> One or more IS areas were grossly low: reject non-detects (R<sup>5</sup>). Refer to Section on "Internal Standard Performance" for details.
- R<sup>6</sup> % Breakdown for DDT was greater than 20%: estimate positive results for DDT (J<sup>17</sup>), DDD, and DDE (JN<sup>17</sup>) in all associated samples. If no DDT is present, but DDD and/or DDE are present: reject the CRQL (R<sup>6</sup>) for DDT. Refer to Section on "Pesticide Instrument Performance" for details.
- R<sup>7</sup> % Breakdown for endrin was greater than 20%: estimate positive results for endrin (J<sup>18</sup>) and endrin ketone (JN<sup>18</sup>) in all associated samples. If no endrin is present, but endrin ketone and/or endrin aldehyde are present: reject the CRQL (R<sup>7</sup>) for endrin. Refer to Section on "Pesticide Instrument Performance" for details.
- R<sup>9</sup> Sample was analyzed grossly outside of the required 12 hours from the last tune: estimate (J<sup>24</sup>) positive results and reject (R<sup>9</sup>) non-detected results in the affected samples. Refer to Section on "GC/MS Tuning" for details.

# DATA VALIDATION RECOMMENDATION FOOTNOTES - INORGANICS

## DATA VALIDATION RECOMMENDATION FOOTNOTES - INORGANICS

	A blank space denotes no change to the laboratory reported results.
J¹, UJ¹	Holding times have been exceeded or samples were improperly preserved prior to analysis: estimate positive results (J¹) and non-detects (UJ¹). Refer to Section on "Holding Times" for details.
$J^2$ , $UJ^2$	Linearity was poor near the CRDL (low levels). Estimate the results. Refer to Section on "Calibration Verification Results" for details.
U³	The compound was present in the associated blank. The sample result was less than the action level of 5x the maximum concentration found in any blank, and has been rejected. Alternatively, the associated blank had a value below the negative IDL. The detection limit and/or positive results may be biased low. Refer to Section on "Laboratory Blank Results" for details.
J <sup>4</sup> , UJ <sup>4</sup>	The ICS recovery for an element is outside of criteria or interelement interferences were indicated. The reported results or detection limit is estimated. See the Section on "ICP Inference Check Sample Results" for details.
J <sup>5</sup> , UJ <sup>5</sup>	The recovery of an element is outside of criteria. The reported results or detection limit is estimated. See the Section on "Matrix Spike Results" for details.
J <sup>6</sup>	The RPD for laboratory duplicate sample analysis results exceeded 20% (35% for soils) for this analyte. The reported results are estimated See the Section on "Laboratory Duplicate Results" for details.
$J^7$	The RPD for the field duplicate sample analysis results exceeded 30% (50% for soils) for this analyte. The reported results are estimated. See the Section on "Field Duplicate Results" for details.
J <sup>8</sup> , UJ <sup>8</sup>	The LCS recovery for an element is outside of criteria. The reported results or detection limit is estimated. See the Section on "Laboratory Control Sample Results" for details.
J <sup>9</sup>	The %RSD of duplicate injections for GFAA analysis do not agree within ± 20%. The sample results are estimatedd. See the Section on "Furnace AA

Results" for details.

J <sup>10</sup> , UJ <sup>10</sup>	The recovery of analytical spikes for GFAA analysis is outside of control limits. Positive sample results or detection limits are estimated. See the Section on "Furnace AA Results" for details.
J <sup>11</sup>	The sample required MSA which either was not performed, was performed incorrectly, or the correlation coefficient was < 0.995. The positive results are estimated. See the Section on "Furnace AA Results" for details.
J <sup>12</sup> , UJ <sup>12</sup>	The results of the ICP Serial Dilution experiment was outside of criteria. Positive sample results or detection limits are estimated. See the Section on "ICP Serial Dilution Results" for details.
J <sup>13</sup> .	Element should have been run by GFAA. The reported value is an estimate.
J <sup>14</sup>	The sample was less than 50% solids. Analysis using a method intended for soils might not give representative results. The results are estimated.
$\mathbb{R}^1$	Holding times have been grossly exceeded. Reject all non-detects.
R <sup>2</sup>	Instrument calibration was either not performed or not performed properly. Reject all associated data.
R <sup>3</sup>	The ICS recovery for an element was less than 50% or severe interelement interferences were detected. Reject all associated data.
R <sup>4</sup>	The matrix spike recovery for an element was less than 30%. Reject all associated data.
R <sup>5</sup>	The recovery of an element in the aqueous LCS was less than 50%. Reject all associated data.
R <sup>6</sup>	The analytical spike recovery for GFAA analysis was less than 10%. Reject the sample result.
R <sup>7</sup>	The MSA did not meet criteria. Reject the sample result.
$\mathbb{R}^8$	The ICP Serial Dilution did not meet criteria. Reject all associated data.
